

Principles of Creation (3)

The Dual Characteristics of God

- Anyone can prove the existence of God scientifically. (Rom 1:20)
- --> God's power and deity is known through all things.
- ; All things = the natural world --> natural science --> natural law.
- (a) The Philosophy of the seed (explanation of the seed).
- --> Explanation of design and form
- magnet energy
- both consist of energy
- seed energy
- (1) Seeds consists of cells. cells --> molecules --> atoms --> particles --> energy.
- (2) The seed is planted.
- 1) When a seed is planted in the ground, its energy absorbs (attracts) mineral matter (soil, water, air, light).
- 2) This seed energy transforms mineral matter into plant matter.
- 3) Then, this seed energy uses the plant matter to form its body.
- (3) How does the seed energy make its species and form by using the plant matter ?
- 1) Examples of iron , metal and material : Train, boat, submarine, car, bus, airplane.
- 2) Examples of plants: Tree --> bamboo, pine, willow, palm, maple, bush, vine.
- 3) Other examples of plants: Grain --> rice, wheat, barley, rye, oats, beans. Fruit --> apple, pear, peach, plum, papaya, grapefruit.
- 4) There is a design in the seed.
- --> The plant grows from the seed energy and makes its kind (species) and form according to the design which is compacted (condensed) without using paper.

We call this "somebody" God, who is the creator.

- 5) In order for the design (blueprint) to be made it would need (require) several thousand sheets of paper.
 - 6) In the seed, there must be a design which is compact (condensed) without (extensive) using paper.
 - (4) Who makes this wonderful, miraculous design?
 - --> Does mankind do this? Absolutely not!
 - 1) Every seed consists of energy.
 - --> In the seed there must be a design by which the form is decided.
 - 2) In the design and form, there must exist function.
 - 3) This function must realize the purpose of existence. Function requires design and form. Design and form require energy.
 - 4) Conclusion: Omniscient, omnipotent "somebody" made this energy, design and form, function and purpose in the seed.
- 2) In the design and form, there must exist function.
 - 3) This function must realize the purpose of existence. Function requires design and form. Design and form require energy.
 - 4) Conclusion: Omniscient, omnipotent "somebody" made this energy, design and form, function and purpose in the seed.
